Verb alternations

Verb alternation: one verb appears in two (or more) different syntactic frames

(1) **Dative alternation**

- a. *Peter gave Mary a book.*
- b. *Peter gave a book to Mary.*

(2) **Locative alternation**

- a. *Peter sprayed paint on the wall.*
- b. *Peter sprayed the wall with paint.*

(3) **Body-part possessor ascension alternation**

- a. *Peter kissed Mary's cheek.* **NPoss**
- b. *Peter kissed Mary on the cheek.* **AccEPC**

What is interesting about verb alternations?

- Meaning differences between the alternating forms
- The source of these differences
- Verb alternations as a playground for the research on verbal semantics: identification of classes of verbs (e.g., Levin 1993)

Goals of the presentation

- More fine-grained verbal taxonomy motivated by the verbal behavior in the alternations in question
- Lexical rule that allows to account for these alternations

Agenda

- State of research: alternating forms and associated verbal meanings
- Body-part possessor ascension: bundle of alternations
- New verbal taxonomy
- Dowty's (2001) approach to body part-possessor ascension and its shortcomings
- Adjusted lexical rule for body-part possessor ascension

Underlying assumption

Different meanings tend to be expressed in different forms.

Different forms are indicative of meaning differences.

(4) **Entailment of physical integrity:**

- a. *Peter touched Mary's arm.* —
- b. *Peter touched Mary on the arm.* +

Further known differences btw. AccEPC and NPoss

- Affected possessor in AccEPC vs. distant possessor in NPoss (e.g., Chappell and McGregor 1996, Heine 1997).
Weak affectedness ≠ Beavers's (2011) affectedness
- In AccEPCs, possessor is mostly animate
- Verbs appearing in AccEPC are mostly verbs of direct physical influence
- Levin (1993):
Different from *hit-*, *cut-*, and *touch-*verbs, *break-*verbs do not allow NPoss-AccEPC alternation.
 - (5) a. *Peter touched Paul on the arm.*
 - b. **Peter broke Paul on the arm.*

Explanations for *break*-verbs

Levin (1993): *Break*-verbs do not entail physical contact.

? But *verletzen* 'injure', which also lacks this entailment, is fine:

- (6) *Peter hat seinen Freund am Bein verletzt.*
Peter has his friend:ACC on the leg injured
'Peter injured his friend on the leg.'

Explanations for *break*-verbs

Dowty (2001): "out-of-order" entailment holds for the part, but not for the whole.

? But what about other *break*-verbs, such as *deformieren* 'deform' and *einschlagen* 'smash'?

- (7) * *Peter hat seinen Freund am Bein deformiert.*
Peter has his friend:ACC on the leg deformed
int.: 'Peter deformed his friend on the leg.'

► **What prevents *break*-verbs from appearing in NPoss-AccEPC alternation?**

Methodology

- Verbs considered: *damage*-verbs with different levels of affectedness (cf. Beavers 2011)
- Analysis of syntactic behavior of these verbs as related to the NPoss-AccEPC alternation

Results: alternating frames and verb classes

There are four alternating forms => Five verb classes

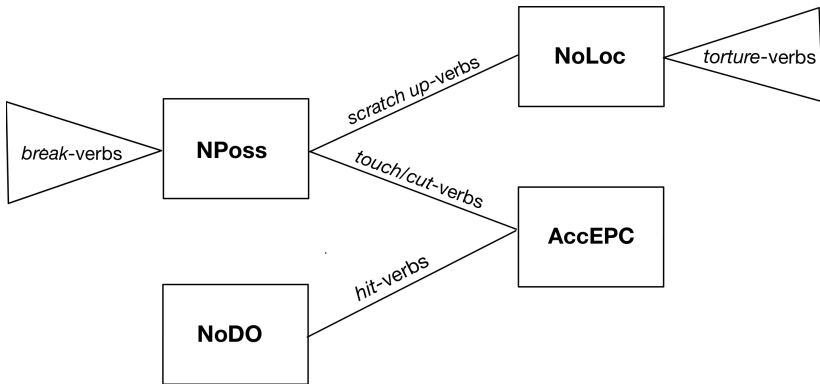

Figure 1: Verb classes and alternations

Results: alternating frames and verb classes

There are four alternating forms => Five verb classes

Results: alternating frames and verb classes

There are four alternating forms => Five verb classes

4. *break-verbs*:

brechen 'break', *deformieren*
'deform', *einschlagen* 'smash'

- (14) *Peter hat Pauls Bein gebrochen.*
Peter has Paul's leg broke.
'Peter broke Paul's leg. '
- (15) * *Peter hat Paul am Bein gebrochen.*
Peter hat Paul:ACC on the leg broke
int.: 'Peter broke Paul on the leg. '

Results: alternating frames and verb classes

There are four alternating forms => Five verb classes

5. torture-verbs:

quälen 'torture', *peinigen*
'tantalize', *kränken* 'hurt',
plagen 'plague'

- (16) *Peter hat Paul gequält.*
Peter has Paul tortured.
'Peter tortured Paul. '
- (17) * *Peter hat Paul am Bein gequält.*
Peter hat Paul:ACC on the leg tortured
int.: 'Peter tortured Paul on the leg. '

Results: crucial observations

- Affectedness expressed in AccEPC-frame (weak affectedness) is related to the ability of the affectee [+ANIM] to perceive the action

Results: crucial observations

- Affectedness expressed in AccEPC-frame (weak affectedness) is related to the ability of the affectee [+ANIM] to perceive the action

Results: crucial observations

- Affectedness expressed in AccEPC-frame (weak affectedness) is related to the ability of the affectee [+ANIM] to perceive the action
- Specific result states do not allow localization [-LOC]; NPoss-NoLoc is not a verb alternation

Results: crucial observations

- Affectedness expressed in AccEPC-frame (weak affectedness) is related to the ability of the affectee [+ANIM] to perceive the action
- Specific result states do not allow localization [-LOC]; NPos-NoLoc is not a verb alternation
- Only restrictive modifiers are allowed in the locative $PP_{Possessee} \Rightarrow$ specifies further the manner of action \Rightarrow *torture-verbs* don't allow locative $PP_{Possessee}$

Results: account for alternations

Traditional account for verb alternations:

- A lexical rule that productively derives a lexical entry from a basic one.
- The lexical rule applies under filtering conditions (to sort out verbs not participating in the alternation)

Results: account for alternations

What do we need to account for?

Existing approach

Filtering conditions in Dowty's (2001) lexical rule:

- "out-of-order"-condition:
"out-of-order" entailment holds for the part, but not for the whole
- ? other *break*-verbs

Existing approach

Filtering conditions in Dowty's (2001) lexical rule:

- "part-to-whole spread" of the result state
 - ? *scratch up*-verbs

Existing approach

Filtering conditions in Dowty's (2001) lexical rule:

- "part-to-whole spread" of the result state

? *scratch up*-verbs

- (18) *Peter hat Paul am Arm / Rucksack gepackt.*
Peter has Paul:ACC **at the arm /backpack** grabbed
lit.: 'Peter grabbed Paul at the arm/ at the backpack.'
- (19) *Peter hat Paul am Arm / *Rucksack berührt.*
Peter has Paul:ACC **at the arm/ *backpack** touched
lit.: 'Peter touched Paul at the arm/*at the backpack.'

? Conditions for "part-to-whole spread"

Results: improved lexical rule

Adopted from Dowty's account:

- Input verbs: any kind of verbs

Adjusted filtering conditions - "the spreading conditions":

- Verbs must not entail a specific result state (cf. Beavers's (2011) quantized change)
- Possessee is physically attached to the possessor
- Possessor must be able to perceive the action physically

Conclusions:

- Body-part possessor ascension alternation: four syntactic frames
- Five classes of *damage*-verbs
 - *break*-verbs
 - *touch/cut*-verbs
 - *scratch up*-verbs
 - *hit*-verbs
 - *torture*-verbs
- For the derivation of AccEPC-frame, the filtering conditions of the lexical rule need to be adjusted as related to the **specificity of the entailed result state**, the **possessor's ability to physically perceive the action**, which is conditions by the **physical attachment** between the possessor and the possessee.
